

LEAD SCORE CASE STUDY

SUBMITTED BY NEHA SHARMA

PROBLEM STATEMENT

- ▶ X Education sells online courses to industry professionals.
- ▶ X Education gets a lot of leads, its lead conversion rate is very poor. For example, if, say, they acquire 100 leads in a day, only about 30 of them are converted.
- ▶ To make this process more efficient, the company wishes to identify the most potential leads, also known as 'Hot Leads'.
- ▶ If they successfully identify this set of leads, the lead conversion rate should go up as the sales team will now be focusing more on communicating with the potential leads rather than making calls to everyone.

BUSINESS OBJECTIVE

- ▶ X education wants to know most promising leads.
- ▶ For that they want to build a Model which identifies the hot leads.
- ▶ Deployment of the model for the future use.

SOLUTION METHODOLOGY

Data cleaning and data manipulation.

1. Check and handle duplicate data.
2. Check and handle NA values and missing values.
3. Drop columns, if it contains a large number of missing values and are not useful for the analysis.
4. Imputation of the values, if necessary.
5. Check and handle outliers in data.

Exploratory Data Analysis(EDA)

1. Univariate data analysis: value count, distribution of variables, etc.
2. Bivariate data analysis: correlation coefficients and pattern between the variables etc.
3. Feature Scaling & Dummy variables and encoding of the data.
4. Classification technique: logistic regression is used for model making and prediction.
5. Validation of the model.
6. Model presentation.
7. Conclusions and recommendations.

DATA MANIPULATION

- ▶ Total Number of Rows=37, Total Number of Columns =9240.
- ▶ Those columns has only one unique value with no null values so we can drop these columns as these columns does contribute to the model.
- ▶ Magazine
- ▶ Receive More Updates About Our Courses
- ▶ Update me on Supply Chain Content
- ▶ Get updates on DM Content
- ▶ I agree to pay the amount through cheque

DATA MANIPULATION

- ▶ drop those columns having more than 40 % of missing values.
- ▶ Lead Profile
- ▶ Lead Quality
- ▶ How did you hear about X Education
- ▶ Asymmetrique Activity Index
- ▶ Asymmetrique Profile Index
- ▶ Asymmetrique Activity Score
- ▶ Asymmetrique Profile Score
- ▶

Univariate Analysis and Bi-variate Analysis

Box Plot

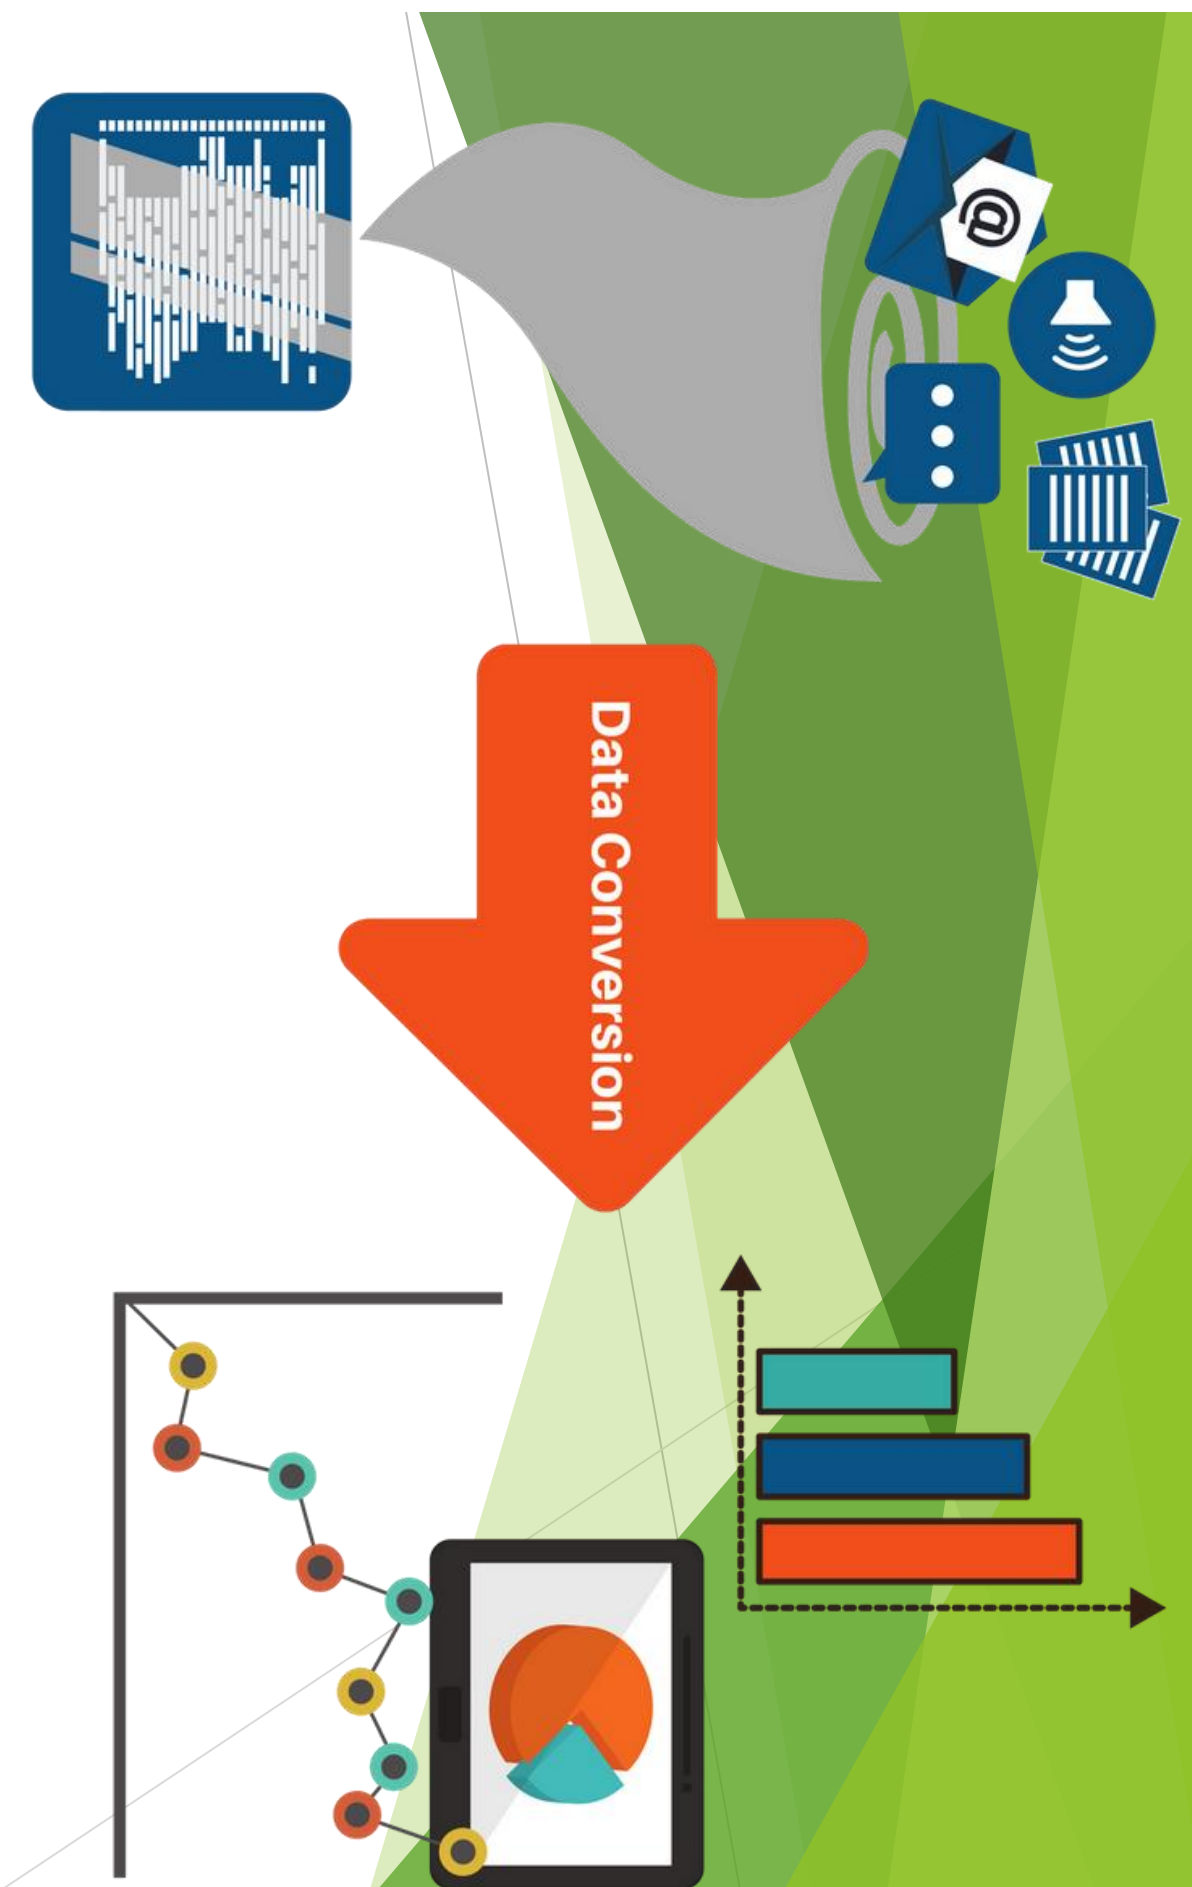

HEAT MAP

- Total visits and Page views per visit column are correlated. Hence we should have either of this column in our model to avoid multi-collinearity.

DATA CONVERSION

- ▶ Numerical Variables are normalized
- ▶ Dummy Variables are created for object type variables
- ▶ Total Rows for Analysis: 9074
- ▶ Total Columns for Analysis: 77

MODEL BUILDING

- ▶ Splitting the Data into Training and Testing Sets
- ▶ The first basic step for regression is performing a train-test split, we have chosen 70:30 ratio.
- ▶ Use RFE for Feature Selection
- ▶ Running RFE with 20 variables as output
- ▶ Building Model by removing the variable whose p-value is greater than 0.05 and vi value is greater than 5
- ▶ Predictions on test data set

ROC Curve

- ▶ Finding Optimal Cut off Point
- ▶ Optimal cut-off probability is that
- ▶ Probability where we get balanced sensitivity and specificity.
- ▶ From the second graph it is visible that the optimal cut off is at 0.35.

PREDICTION ON TEST SET

- ▶ Before predicting on the test set, we need to standardize the test set and need to have exact same columns present in our final train dataset.
- ▶ After doing the above step, we started predicting the test set, and the new prediction values were saved in a new data frame.
- ▶ After this we did model evaluation i.e. finding the accuracy, precision, and recall.
- ▶ The accuracy score we found was 0.74, precision 0.63, and recall 0.69 approximately.
- ▶ This shows that our test prediction is having accuracy, precision, and recall scores in an acceptable range.
- ▶ This also shows that our model is stable with good accuracy and recall/sensitivity.
- ▶ Lead score is created on test dataset to identify hot leads – high the lead score higher the chance of conversion, low the lead score lower the chance of getting converted.

CONCLUSION

It was found that the variables that mattered the most in the potential buyers are.

Lead Origin_Lead Add Form.

Lead Source_Welingak Website.

Last Activity_Had a Phone Conversation.

Leads Lead Origin_Lead Import and working profession with coefficient
TotalVisits on the Website.

Olark Chat.

Keeping these in mind X Education can flourish as they have a very high chance to get almost all the potential buyers to change their mind and buy their courses.
